CAREER PATH & ENGAGEMENTS

AboutProjectsExperienceAchievementsReach

Q

Work Experience

Professional track record spanning full-stack development, applied machine learning pipelines, client real-estate platforms, and production Python engineering.

Software Developer & AI Specialist

CURRENT

June 2026 - Present

Mumbai, India

Giga Nexus Technology

Architecting resilient web systems leveraging Next.js, Node.js, and TypeScript.

Developing AI/ML integration pipelines for smart data extraction, classification, and real-time processing.

Collaborating across engineering cycles to deliver high-performance, accessible, and maintainable codebases.

Overseeing technical design consistency, deployment pipelines, and modern frontend architecture.

Technologies Applied:

Full-Stack Web

AI Pipelines

Next.js

TypeScript

Python

Production Architecture

AboutProjectsExperienceAchievementsReachQ🔄

ORIGIN & PHILOSOPHY

Obsessively Shipping at the Edge of Web & AI

I'm Aman, a developer from Mumbai building at the intersection of full-stack web and applied AI/ML. I design and ship smart, AI-powered web applications — from MERN dashboards and real-estate platforms to NLP tools, ML pipelines and operator-grade analytics surfaces.

My focus is on clean architecture, honest UX and code that ages well. I lean on the MERN stack, Next.js and Python (Scikit-learn, TensorFlow, Pandas) to turn fuzzy problems into shipped, measurable products.

On GitHub (@amaanshaikh711) I ship in public — open-source projects, ML experiments, real-estate platforms (LussoHomes), AI tools (HateSense AI, Insightify, HealthScan Pro) and hackathon builds. Most repos prioritize readable code, tight commits and production-style structure over noise.
